

Doug Canny

IT Systems Engineer | DevOps | Automation

dougcanny@outlook.com | [linkedin.com](https://www.linkedin.com/in/dougcanny/)

DevOps Engineer with nearly 20 years of experience spanning IT support, cloud infrastructure, and automation engineering. Proven track record of designing scalable CI/CD pipelines, infrastructure as code (IaC), and PowerShell-based tooling to improve performance and developer efficiency. Strong hands-on expertise with AWS, Azure, GitHub Actions, Jenkins, and Terraform in production environments.

Technical Skills

- Automation & Scripting: PowerShell
- CI/CD & DevOps: GitHub Actions, Jenkins, AWS CodeDeploy, Terraform
- Cloud & Infrastructure: AWS, Azure, Kubernetes (EKS, AKS)
- Systems & Databases: Windows Server (2012-2019), IIS, MS SQL Server, MySQL

Professional Experience

Senior I/O Engineer (Sr. DevOps Engineer)

Genoa Healthcare – Renton, WA. | August 2019 – March 2025

CI/CD & Deployment Automation

- Designed and implemented the company's first CI/CD pipeline using Jenkins, replacing error-prone manual deployments with automated builds, IIS service handling, and artifact storage; standardized release processes and reduced developer workload.
- Automated environment-specific IIS deployments via PowerShell scripting in Jenkins, allowing developers to configure settings without manual intervention.
- Integrated AWS CodeDeploy with Jenkins to streamline application rollouts to Windows EC2 servers, reducing deployment friction.
- Migrated legacy Jenkins workflows to GitHub Actions, accelerating build and deployment cycles.
- Developed fully automated database deployment pipelines for MS SQL using Jenkins and PowerShell.

PowerShell Automation & Infrastructure Management

- Built ProdOpsTools, a centralized PowerShell toolkit with 75+ functions, deployed to 80% of servers via Jenkins and CodeDeploy. Replaced scattered, ad-hoc scripts with version-controlled modules and per-server aliases, improving consistency and enabling streamlined automation, particularly for the SQL-focused Data Team. Included modules for AWS, MSSQL, Jenkins, PostgreSQL, and Tableau to simplify common operational tasks.

Cloud & Infrastructure as Code (IaC)

- Provisioned and maintained AWS and Azure infrastructure using Terraform, including EC2, S3, ALBs, NLBs, and Kubernetes clusters (EKS/AKS).
- Led infrastructure-as-code initiatives to improve repeatability and reduce configuration drift across environments.

Key Achievements

- Launched self-service deployment workflows, decreasing developer dependency on ops teams.
- Consolidated PowerShell automation into a reusable toolkit adopted across IT teams.
- Drove CI/CD modernization by transitioning legacy Jenkins pipelines into scalable GitHub Actions workflows.

Senior Lead IT Engineer

CenturyLink Cloud – Bellevue, WA. | July 2015 – August 2019

- Developed AliceMaid, a PowerShell-based automation framework that monitored Zendesk queues, alerted engineers via Slack before SLA violations, and delivered hourly queue health summaries; virtually eliminated missed SLA response times for the Support team and was later adopted by all internal IT teams.
- Designed a metadata-driven configuration system for AliceMaid using MySQL to define support schedules, feature usage, and Slack routing rules. Generated team-specific XML configs at runtime to improve reliability, reduce external dependencies, and support dynamic automation across all internal support queues.
- Provided enterprise-level support for the CenturyLink Public Cloud platform, resolving customer-impacting issues via tickets, chat, and phone with a 98%+ resolution rate within documented SLAs.

Windows Systems Administrator

FriendFinder Networks Inc. – Campbell, CA. | April 2013 – July 2015

- Supported 30+ Windows-based servers delivering live streaming services; improved uptime and reliability through proactive monitoring and automation.
- Automated service monitoring and recovery using PowerShell, replacing manual on-call interventions and virtually eliminating recurring outages tied to unstable API processes.
- Created custom PowerShell and MS SQL monitoring scripts to proactively identify video service issues, reducing incident response times.
- Took over SSL certificate management after repeated public outages, implementing structured renewal tracking and NetScaler updates; no expirations occurred during tenure.
- Consolidated domain management for 3,000+ properties, migrating the majority to GoDaddy per leadership directive; managed renewals, DNS updates, and ensured compliance for international TLDs requiring local presence.
- Developed an internal ASP.NET/C#/MS SQL web app to surface domain and SSL data company-wide; enabled product owners and marketing to search, sort, and track expiration timelines, improving visibility and coordination across teams.
- Deployed and managed PasswordState for company-wide IT credential management, with AD group integration and self-service vault adoption.

Additional Experience

- Various roles supporting Microsoft, including as a Systems Engineer and Team Lead for MSN's publishing platform.
- Expertise in IIS administration, server patching, pre-production testing, and team leadership.

Education

- Mission College | Santa Clara, CA – Linux Essentials, Shell Scripting

Professional Development

- Azure Fundamentals Training (5-day course): Completed instructor-led training on core Azure services and cloud concepts.
- Terraform Infrastructure as Code Training: Gained hands-on experience in writing and deploying Terraform configurations.
