

TARGET THIS ROLE — SYSTEM ARCHITECTURE VISUAL DIAGRAM

FULL SYSTEMS ARCHITECTURE REFERENCE SHEET

Client Layer

- Web App (React)
- iOS App (React Native)
- Android App (React Native)
- Desktop App (Tauri)

API Layer

- API Gateway routing to backend modules
- Authentication enforcement
- Request validation

Backend Services (Modular Monolith)

- Auth and Identity Management
- Baseline Resume Service (upload, parse, version, hash)
- Job Ingestion and JD Normalization
- Compatibility Engine producing Fit Score
- Baseline Expansion Interview module
- Tailoring Service for resumes and cover letters
- Interview Toolkit (STAR stories, prep tools)
- Search Set Builder and Runner
- Job Tracker
- Compliance Engine enforcing zero fabrication
- Billing Service using Stripe

AI Layer

- Prompt Builder
- Model Router
- Embedding Generator
- Output Validator
- Compliance Wrapper for all AI operations

Data and Storage

- PostgreSQL for structured data
- Vector Store (pgvector or OpenSearch)
- S3 compatible object storage
- Hashed baseline versions
- Audit logs

Infrastructure

- Vercel or Netlify for frontend hosting
- Render, Railway, or AWS ECS for backend
- Lambda or container workers for file generation
- CI/CD using GitHub Actions

Security

- JWT authentication
- Hashed baseline versions
- Audit logs for all generated artifacts
- Strict HTTPS communication
